ESMO conference in Bella Center

Teletech delivered interpretation equipment for 5000 participants at ESMO 2016 in Bella Center

The annual ESMO congress was held in the Bella Center in Copenhagen from 7-11 October 2016.

The congress is described by the European Society for Medical Oncology (ESMO), as the leading scientific platform for research in the field. ESMO was one of the largest congresses in Copenhagen ever with 20,000 participants and 460 invited speakers.

Teletech was asked to deliver IVS voting systems to a total of 5,000 participants at the many satellite symposiums. Logistically, it was a big and interesting

challenge for our project managers and technicians.

To utilize the equipment efficiently across the symposium, our technicians set up and transferred the equipment multiple times to different locations.

In addition, they were responsible for operating and programming all questions for the voting sessions.

The IVS voting systems enabled the organizers and participants to get valuable data and knowledge.
