

MPI EMEC conference in Copenhagen

Teletech was sole supplier of technical equipment

In connection with the MPI EMEC conference, held at the Radisson Blu Scandinavia, Teletech was given the task to stage the 60x15 meter Grand Ballroom.

This was solved by building a 40x4 meter back wall, highlighted with our wireless LED up-lights, and with two integrated presentation screens. The backdrop was completed by two 12 x 4 meter rear projection screens for displaying of mood pictures.

The entire imagery was controlled by two Analog Way switchers so that the content could freely be moved

between the screens, the effect being stressed by the division of the audio system, which allowed the audio to follow the image.

At the conference we also delivered a wide range of flat screens on stands, that worked like a digital signage solution.

We are very happy for all the positive feed-back we have received for this conference and we are looking forward to more challenging and exciting jobs.
