Stjerne Radio (Star Radio)

Installation in a historical place

On August 29th, the anniversary of exception state introduction in Denmark, Star Radio reopened with the August Rebellion exhibition.

The resistance group Holger the Dane arose in the back room of Star Radio. With the Society Star Radio's restoration of the original facade they created a unique showcase for communicating information about the occupation in Denmark.

In order to support and visualize the immediate and future exhibitions, Teletech installed a six-meter long video display that shows photos, movies and texts.

To ensure maximum flexibility, we have chosen to program all the content in QLab, which also made possible to accommodate the wishes of being able to alternate photography, film and a digital newspaper feature.
