

EU Presidency 2012

Tourguide used aboard a train

One of our many tasks as total supplier of audiovisual equipment and translation facilities for the EU Presidency 2012 was partly providing tourguide systems.

It was used in conjunction with an "on wheels" conference. The venue was a train between the two host cities, Copenhagen and Horsens. This happened

midway through the Presidency, where the host city was changed. Since the equipment is very flexible and reliable, it was in itself not a challenge to use it on a train. However, this task demanded that our technician placed amplifiers throughout the train, to ensure that all the participants could hear the lectures clearly.
